

A Selection of Pellets sectioned to show their profile. All of the pellets were photographed at x2 and x3 lifesize. It should be noted that the profiles do seem to vary depending on age, batch number and head size. JSB Exacts, the first two digits are the die number (unless there is a dash in front in which case it is the first digit), the last two are the year of manufacture and the batch number for that year is shown below the long number. The numbers between the first two and last two are not relevant.
